

**YOU NEED A
BUILDING
THAT'S RELIABLE**

FIERCELY RELIABLE

AGRICULTURE BUILDING SOLUTIONS

At Norseman Structures, we understand the daily challenges you face from unpredictable weather to equipment failure. This is why we have designed our buildings to be the one thing you can rely on, in any season.

NORSEMAN STRUCTURES PROVIDES BUILDINGS YOU CAN TRUST.

Trust in our buildings to protect your most valued assets and give you year-round peace of mind. With your commodities, equipment and livestock in our care, you can focus on maximizing your profits and planning for the future.

CLEAR-SPAN INTERIOR

Stacking hay, feeding livestock, and storing equipment have never been easier with Norseman Structures' clear span interior design. Buildings are available in a wide variety of heights and widths, giving you the flexibility to design for optimal performance.

LOW MAINTENANCE COSTS

Built for long-term durability, Norseman Structures buildings are virtually worry-free and easy to maintain. Our high performance fabric covers have tremendous rip, tear, and puncture resistance, so in hail, heat, or wind, your most valuable assets are protected.

NATURAL LIGHT

The buildings' translucent cover allows an abundance of natural light into our buildings, contributing to a lower stress environment for livestock. The cost for lighting is reduced because the white underside of the cover is highly reflective, meaning fewer lights are needed during the day and at night; another great way a building from Norseman Structures saves you money.

VENTILATION AND AIR QUALITY

Norseman Structures' buildings are well ventilated because of their high, open ceilings, optional ridge-vents and removeable side wall curtains. Your livestock will breathe fresh air and your commodities are less likely to spoil.

VERSATILITY

Whether you need storage space for equipment, shelter for your livestock or an indoor riding space, Norseman Structures has a variety of buildings that can be customized to suit your needs.

QUICK INSTALLATION AND QUALITY SERVICE

Norseman Structures buildings can be installed in a fraction of the time needed for traditional structures. This means less downtime for your operations and more time spent growing your business. Our buildings are backed by the best installation and product support teams in the industry. Customers can rely on Norseman Structures to deliver superior customer service before and after their building purchase.

Why Choose a Fabric Building	Fabric	Wood	Steel
Clear-Span Design	✓	X	X
Naturally Bright Interior	✓	X	X
Relocatable	✓	X	X
Quick Installation	✓	X	X
Low Project Costs	✓	X	X
Low Maintenance	✓	X	X

LIVESTOCK FACILITIES

Creating the ideal living environment for your livestock is a high priority for you. The more comfortable your livestock is, the healthier they will be and the more profitable your operation will be. Increase your feed efficiency and quality of livestock with a Norseman Structures building by providing a controlled, natural environment. The ventilation in a Norseman Structures building is far superior to conventional buildings due to the open, rafter-free space and high ceilings.

EQUIPMENT STORAGE

With thousands of dollars worth of equipment on your farm, you need a place to store it to maintain its value. Equipment left exposed to weather can deteriorate in value quickly. Save money by reducing the cost of repairs and the time spent on maintenance.

RIDING ARENAS AND STABLING

You look for the best in equipment, horses, supplies, and above all, in your riding facility. A fabric building from Norseman Structures brings the outdoors in, so that you can ride and train 365 days a year, in all weather conditions. Benefit from safer riding conditions, a quiet atmosphere, and perfect footing inside a Norseman Structures riding arena.

COMMODITY STORAGE

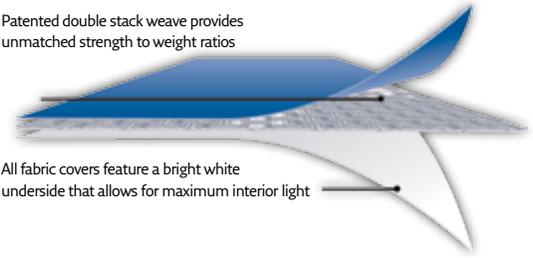

Protecting your freshly harvested crop from unfavorable weather conditions is crucial in order to maintain a high quality crop. Take some uncertainty out of farming and store your commodities in a Norseman Structures building. Unlike other crop storage systems, Norseman Structures buildings can be used for multiple applications such as off-season equipment storage or a maintenance shop.

Building Components

FABRIC COVERS

- Covers are manufactured from 12 oz/yd², 23 mil (0.59 mm) thick polyethylene fabric.
- Created using a layer of woven tapes (scrim) coated with a specialized 4 mil thick protective layer front and back that helps avoid scuffing and UV damage.
- Tremendous rip, tear and puncture resistance. Virtually maintenance free.
- Fire retardant (FR) covers are available. PVC is available upon request.
- Heavy-duty winches and zero-stretch belting and/or cables ensure covers stay tight and secure.

Patented double stack weave provides unmatched strength to weight ratios

STEEL FRAMEWORK

High-quality galvanized steel framework is standard in all building designs. To ensure maximum strength, Norseman Structures uses two different galvanizing processes.

- **In-Line Galvanizing:** The heavy-duty, in-line galvanized steel is triple coated. First with a thick layer of protective molten zinc. Next, a conversion coating bath provides an additional layer of corrosion protection. This is followed by a clear organic coating to seal the steel.
- **Hot-Dipped Galvanizing:** Products are manufactured using high strength steel, hot-dipped in a bath of molten zinc. This galvanizing process creates a product that is highly resistant to corrosion and is virtually maintenance free.

WHY NORSEMAN STRUCTURES

We have a wide range of standard building sizes and models ranging from 18' to 130' wide, built to any length. If what you need is not in our current line-up, we have the expertise to custom design a building in a size and configuration that you need. In addition to manufacturing buildings, Norseman Structures provides project management, technical representative services and complete building installations. Our team of experts will work closely with you to design a building solution that will work for you and your business.
